- WPS/Reset reset button
- WiFi Indicator

WPS/Reset: Press the button in 1-2 s for WPS function.
(Note: WPS only supports wireless use of mobile phone);Long press for more than five seconds, The wifi light flashes green for 3 seconds, the reset is successful.

⚠ Warning

1. Unplug it in thunderstorm and prevent it from lighting damage.
2. Away from heat and keep ventilation.
3. Please pay attention to waterproof when storing, transporting and operating.

2 ▶ Initial Connection

2.1 Use a wireless device to connect to the device with the SSID of COMFAST_XXXX_2G (XXXX is the last two digits of the MAC address). After the connection is complete, open the browser and enter the IP address 192.168.10.1, enter the login page, and enter the default password admin to log in to the web page. After logging in, the page jumps to the relay mode scanning page. After the scan is over, the page refreshes to select the device list.
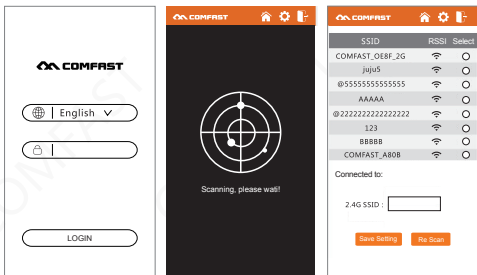

2.2 Click the device that needs to be extended, the information bar at the bottom of the page will match the information of the selected device, fill in the corresponding password and "2.4G SSID" information, click "Save Setting", wait for the page countdown to end, and then complete the relay mode setting. Use the wireless device to reconnect the "2.4G SSID" just filled in to connect to the device。

3 Log In Normally

3.1 Enter the password and click "Login" to complete the login. If the current device has successfully extended the upper-level device, it will jump to the main page after logging in. If the device is not extended or the extended upper-level device has failed, it will jump to the relay scan page.

4 **Repeater Mode And Bridge Mode**

4.1 Log in to the main page. Click on the repeater mode and bridge mode sections corresponding to the main page to enter the corresponding mode scan page。
5 **LAN settings**

5.1 Click the blue computer icon section on the main page to enter the LAN settings page
